WRITING

a proposal

- 6A** Read the notes about the village of Fari. What does the village need?

a a bridge **b** more residents **c** more shops

The village is close to a wide river which often floods in autumn and winter. The nearest town is on the other side of the river, where there are facilities such as schools, health centres and shops.

There are very few jobs in the village and few opportunities for people.

The nearest bridge is twenty kilometres to the north. There are no buses or trains there.

- B** You are going to write a proposal for a new bridge across the river. Make notes under these headings.

- 1** Introduction
- 2** The current situation
- 3** The economic and social benefits of the new bridge
- 4** Conclusion

- C** Complete the formal phrases with the words in the box.

aim created living proposed result

- 1** The of this proposal is ...
- 2** The village is close to a wide river. As a it often floods ...
- 3** People in the village find it difficult to access facilities on the other side of the river.
- 4** New opportunities will be by the bridge.
- 5** The changes will transform the village.

- 7** Write a proposal for a new bridge across the river. Use your notes in Ex 6B. Write 200–240 words.

The power of connecting

¹ Imagine a village in a remote area, close to a large river that floods regularly. The nearest road bridge is several miles away and the majority of villagers don't have access to a car. For significant parts of the year, the village is cut off from communities on the opposite bank. Or consider an isolated community located on one side of a steep valley. To get to the town on the other side of the valley requires a long, arduous and often dangerous journey on foot. Isolation of this kind remains a significant problem in rural communities around the world. Bridges, by definition, connect areas and there are strong arguments suggesting they can help to transform communities.

² The charity Bridges to Prosperity raises money for the provision of bridges around the world, with the belief that there is a fundamental link between these constructions and increased prosperity. It aims to identify rural communities that are held back by a lack of connection, then organise and fund the construction of bridges, to link communities to the resources and facilities they need. The organisation claims success in countries around the world. In one small community in Nicaragua, for example, it was found that household income increased by thirty percent following the construction of a bridge.

³ So how exactly do bridges increase wealth and prosperity? Firstly, they enable more people to take up employment opportunities by reducing transport costs and travelling time. Easier access to communities also reduces the cost of goods that are brought in. In addition, improved transport links stimulate entrepreneurs and businesses within the community, as the goods they produce can be sold more easily in nearby towns.

⁴ The benefits also extend beyond economic ones. Bridges can allow people to access healthcare facilities more easily. They also enable more children to attend educational establishments, which in turn provides young people with a wider range of career opportunities. Finally, there are benefits that arise from increased access to cultural events and interactions with a wider range of people. All in all, it seems that the power of connecting may be greater than we thought.

 - a have always been considered healthy.
 - b helped our ancestors to survive the winter.
 - 4 Very few natural foods
 - a contain both sugar and fat.
 - b contain the same chemicals as chocolate.

READING

- 3 Read the article below about why we eat. Match the headings (a–c) with the paragraphs (1–3).

a Routine b Hunger c Emotions
- 4 Read the article again. Are the statements True (T) or False (F), according to the writer?
 - 1 When children are under three years old, their appetite is regulated purely by hormones.
 - 2 Gaining enjoyment from food helped early humans to survive.
 - 3 Our senses only make us hungry when we need food.
 - 4 Our body expects food at our usual mealtimes.

Why we eat

We eat because our bodies need food, right? Well, it seems things are actually a lot more complicated than that. Our appetite, apparently, is controlled by three distinct parts of the brain and between them, they may not always know what's best for us.

1.....

Of course, we have a basic physical need for food and this tends to be controlled by the part of the brain responsible for regulating the amount of energy our body needs. After detecting a low level of sugar in our blood, our brain releases a hormone which sends a signal that our stomach is empty and that our body needs more fuel. Once nutrition is taken into the body, the brain releases a different hormone which tells us that we're full and can stop eating. Up to the age of around three, this is the main way in which our bodies regulate the amount we eat and explains why young children will naturally stop eating once they are full, even if there is still food on their plate. By the age of five, however, children still have this ability to self-regulate, but more parts of the brain start to affect their appetite. So the average five year old will continue to finish a whole plate of food, even if they're already full.

2.....

The connection between food and pleasure is extremely powerful and this is controlled by the part of our brain which regulates our feelings. For very good evolutionary reasons, we are designed to feel happy when we eat food. This is a survival mechanism – if our distant ancestors hadn't enjoyed food, they might not have eaten enough and may not have built up stores of fat to keep them going when food was scarce. So, when we experience good food, our brain releases dopamine, the pleasure hormone, to give us the feel-good boost of happiness. This can be triggered when we see a plate of attractive looking food, or smell something which reminds us of a happy memory from childhood. However, our body sometimes wrongly interprets enjoying the sight or smell of food as hunger, even if we aren't actually hungry.

3.....

Our bodies are designed to follow rhythms, like the rhythm of night and day. Things that we regularly do become fixed as unconscious behaviours that are difficult to resist. Again, this is a positive thing in many ways. Once something is a habit, we do it automatically, without having to waste energy making a conscious decision. However, our body may tell us we're hungry simply because it's breakfast time, even if we had a huge meal the evening before. And anyone who has tried to give up a habit knows how difficult it is to go against our body's instincts.

VOCABULARY

industry competition

1 A Choose the correct word to complete the sentences.

- 1 New technology can help the business to **gain** / **pull** / **push** a competitive edge.
- 2 It's important to nurture staff so they **become** / **forge** / **fulfil** their potential.
- 3 The two businesses decided to **form** / **make** / **gain** an alliance, to compete better.
- 4 If we put the effort in now, I'm sure we can **push** / **throw** / **pull** beyond our limits.
- 5 The two managers have always been **sour** / **bitter** / **hard** rivals.
- 6 We really want the company to do better than its main **alliance** / **adversary** / **partnership**.

B Read what the managers say about their business. Then choose the best second sentence (a or b).

- 1 'We won't get anywhere if we try to go it alone!'
a I believe collaboration is the future.
b Cooperation will not help us increase profits.
- 2 'Our rivals are determined to be more successful than us this year.'
a We need to help them push beyond their limits.
b But we mustn't allow them to outdo us.
- 3 'We've managed to increase our profits since other companies started to compete with us.'
a The rivalry has been good for us.
b We need to form more alliances like this.
- 4 'We will monitor your career progress and make sure you are moving forward.'
a We will soon gain a competitive edge.
b We will help you to fulfil your potential.
- 5 'The company needs everyone to work together and work extra hard this year.'
a We all need to push beyond our limits.
b This kind of rivalry will bring huge benefits.
- 6 'We are forging a partnership with our rival.'
a We want them to gain a competitive edge.
b We believe this cooperation will benefit both of us.

a so b did it c did the same

READING

4 A Read the article on page 13. Choose the best title.

- a Is football going out of fashion?
- b Return of the beautiful game?

B Read the article again. Are the statements True (T) or False (F), according to the writer?

- 1 Three-sided football is intended to be less competitive.
- 2 In three-sided football games, teams decide at the beginning who they will cooperate with.
- 3 Three-sided football lacks detailed rules.
- 4 Three-sided football is already extremely popular all over the world.

C Look at the phrases in bold (1–6) in the article. Choose the correct meaning for each one (a or b).

- 1 a directly with each other b for a short time
- 2 a dull and boring b completely fixed
- 3 a cooperate with b betray
- 4 a very quickly b after careful thought
- 5 a impossible with b a natural part of
- 6 a at an early stage b becoming popular

It hardly needs stating that football is hugely popular around the world, but as well as the pleasure that fans take from watching their favourite teams, there are concerns about the way the game has developed. Many now see it simply as a big business, one that's more concerned with making money than the original principles of fair play and sportsmanship. There are also more philosophical objections. Because two teams compete **¹head-to-head**, the game can be seen as encouraging division, creating an 'us vs them' culture. Some would like a return to the sense of fun and enjoyment that were always part of what has been called 'the beautiful game'.

With this in mind, Dutch artist Asger Jorn devised three-sided football in 1962, to create an alternative version which encourages cooperation as well as competition. He believed that having three teams instead of two better reflected the complexity of the society we live in, in which partnerships shift and change and divisions between different groups are not **²set in stone**.

So, how does three-sided football work? Three teams of five players, each with their own goal, play on a hexagonal pitch. Unlike the traditional game where scoring goals is the most important aim, in this version, the team conceding the fewest goals wins. This sets up some interesting dilemmas. Suppose your team and one other team have each conceded a goal. It is then in your interest to make sure the third team also concedes one. So you temporarily form an alliance of ten players, in order to target the five players in the third team. But here's the tricky bit. Your allies may decide that it's in their interest to see you concede a second goal. So if you give them the ball, they may **³double-cross** you and kick it into your goal!

There are as yet no concrete rules about how long each period of play lasts and only loose guidelines on free kicks and throw-ins. As a result, three-sided football has been described as 'organised confusion'. But it is in fact a complex game of strategy and tactics – both a mental and physical workout. Because of the continually shifting alliances and rivalries, players interact with each other across the teams and there are no hard feelings when players betray each other, as it is all part of the game. It also allows individuals to make decisions **⁴on the spur of the moment** about which players to cooperate with and which goal to attack. The ever-shifting nature of the relationships on the pitch mean that games tend to be good-natured, with fun and laughter almost **⁵hard-wired** into the sport.

So far, the game is still **⁶in its infancy**. There are a small number of local leagues operating in a handful of countries and the first official World Cup took place in 2014 in Denmark, with teams from six countries taking part. Fans hope to take the sport forward as an alternative to the cut-throat competitiveness of the more traditional two-sided version of the game.

WRITING

an article

5A Read the first paragraph of an article about the benefits of less competitive sports. Match the words and phrase (1–5) with the functions (a–e).

- a introduces a reason
- b introduces a contrast
- c avoids repeating a verb used earlier
- d refers back to a noun mentioned earlier
- e refers back to a whole idea mentioned earlier

Sport doesn't have to be competitive

We tend to assume that competitiveness in sport is a positive, driving people to perform at a higher level than they would **¹do** if the game were just for fun. **²Nevertheless**, there are also downsides to focusing solely on competition. Firstly, this encourages the mindset that winning is the sole aim of taking part. **³Such** a mindset can lead to feelings of failure when, as is inevitable, players fail to come out on top. Of course, it is impossible to remove the element of competition entirely from sport, **⁴owing to** the very nature of many games. But should we try to focus on less competitive sports instead and might **⁵this** bring benefits?

B You are going to write three more paragraphs to complete the article. Make some notes about the benefits of more competitive sport and the benefits of less competitive sport.

6 Write your three paragraphs to complete the article using your notes from Ex 5B and words and phrases to connect your ideas. Write 220–260 words.

VOCABULARY | business; work benefits

PRONUNCIATION | intonation when comparing

VOCABULARY

business

1 Choose the correct words to complete the text.

During difficult economic times, companies may find that their sales suffer and so they need to introduce ¹initiatives / **profitability** which reduce costs in order to increase ²efficiency / **bankruptcy** across all departments. This helps them to maintain their ³competitiveness / **turnover** within the market and reduce the risk of them ending up in ⁴bankruptcy / **profitability**. However, a reduction in spending can have a negative effect on staff ⁵profitability / **productivity**. Often, a ⁶cutback / **turnover** in staffing means fewer people are there to do the same quantity of work. This means that the remaining staff become more stressed and the amount of work each staff member does may actually fall.

 - b The writer is curious about cold-water swimming and discusses its advantages and dangers, but is not impressed when he tries it.
- 4 Read the article again and choose the correct option (a or b) to complete the sentences.
 - 1 In the first paragraph, the writer suggests that
 - a swimming in cold water must be fun, because it is so popular.
 - b he wants to understand why people enjoy cold-water swimming.
 - 2 Gabbie and Stan
 - a have both experienced improvements in a health condition from swimming.
 - b are both swimming in Scotland for the first time.
 - 3 Research on athletes has shown that ice treatments
 - a can help with mental health problems.
 - b speed up recovery from physical health problems.
 - 4 The writer claims that when jumping into cold water,
 - a your body soon gets used to it.
 - b people should be very cautious, especially if they have never done so before.
 - 5 The author
 - a is unlikely to swim in cold water again.
 - b is keen to try cold-water swimming again.

Anyone fancy ice with their swim?

Let's face it, being cold isn't pleasant. So why are more and more people taking up the challenge of jumping into ice-cold water wearing nothing but a swimsuit? The popularity of wild swimming has grown hugely in recent years, with thousands of people around the world now swimming regularly in rivers, lakes and seas, in all weathers and seasons.

So, what's it like to swim in nearly freezing water? I joined a group of swimmers on a beach in Scotland one cold January morning. Talking to the other members of the group, I found they all had their own positive reasons for their chilly morning swims. Gabbie, 57, told me that the cold water takes away the pain of her chronic arthritis and allows her to move more freely. Since she started swimming, her condition has improved. Stan, 26, explained that he'd suffered with anxiety for years and now believes cold-water swimming has given him the confidence to get back to work.

But what evidence is there for the health benefits of cold-water swimming? It's true that athletes use ice baths after competitions and research proves this can help to more quickly heal damaged skin and muscle tissue, as well as improve heart function and circulation. Some studies also suggest it might be good for treating depression, but it's early days and there haven't been many large-scale studies of the mental-health benefits.

Jumping into ice-cold water can certainly be risky, especially when your body isn't used to it. Even the most enthusiastic supporters of the sport concede that beginners need proper training and supervision. If you are not properly prepared, the cold could literally kill you. A heart attack is a real risk, as is your body just getting too cold to function properly.

So, how did I feel after my dip in the sea off the coast of Scotland? As I'd expected, it wasn't pleasant and I couldn't wait to get out. I did feel good about half an hour afterwards, but not enough to want to repeat the experience!

GRAMMAR

- 1 Complete the second sentence so it has a similar meaning to the first. Use the word in brackets, and no more than four words.

- 3 Choose the correct words to complete the article.

Some students have always found ways to cheat to make sure they get a good mark for an essay. In the past, ¹**what they did was / what happened was** ask a friend or relative to help. Then, with the arrival of the internet, ²**what they did / what they discovered was** that they could look online and find plenty of books and articles they could simply copy. Universities became aware of this, so ³**what they did was install / what they installed** computer systems that could spot examples of writing that were too similar to published texts. But when one form of cheating becomes impossible, ⁴**what happened / what happens** is that students find another. If students still want to cheat, ⁵**what they look for / what they do is look** online and find someone who is willing to write their essay for them, for a fee. So now, ⁶**what universities hope is / what universities do hope** that governments will make these essay-writing services illegal.

- 4 Choose the correct option (a–c) to complete the text.

Companies are generally unwilling to share details of the research they are working on, but they are much keener to ¹..... if their partner is a university, rather than a rival company. By working with a university, companies can often get much faster results than they ²..... if they were working independently. And there are benefits for the universities, too. READING

4 A Read the texts (1–4) on page 19. Choose the theme (a–c) they all share.

- the importance of sleep
- the difficulties of thinking creatively
- the best way to solve difficult problems

B Read the texts again. Match each one with the topics (a–f).

- having a healthy diet in order to be more creative
- being good at different kinds of tasks at different times of day
- trying to understand how different pieces of information relate to each other
- ideas that would be useful for a wide range of people
- finding it easier to have creative ideas when you are slightly tired
- unsuccessful attempts to encourage creativity

- 1 We know that our natural circadian rhythms dictate when our body feels ready for sleep and when it wants to be awake. People can be divided broadly into two types, 'larks' and 'night owls'. Larks prefer to work early in the morning and identify this as their optimal time of day, whereas night owls tend to get up later and believe their best time of day is in the afternoon or evening. People naturally expect to be at their most creative at a certain point of the day and it is true that we demonstrate better problem-solving skills during this optimal time. However, one recent study found that people performed better at creative tasks during their non-optimal times, which is surprising. It may be because the brain is less alert at these times and we are more inclined to relax and dream.

- 2  Help! I've just started a new job at a big advertising agency. It's a great opportunity for me, but I'm really feeling the pressure! I'm expected to come up with creative ideas every day. Some days the ideas just seem to flow, but other days I can sit at my desk for hours on end and absolutely nothing happens. I've tried drinking coffee or not drinking coffee, chatting to people or keeping myself to myself, but nothing seems to make much difference. Does anyone have any tips for keeping the creativity flowing every day?

- 3 Supper finished, I returned to my desk and sat down to read through my notes on the case, written on individual cards I could move around and set in different patterns on my desk. There had to be something here that I was missing – some vital clue that would connect the different people and events, to make sense of it all. Who was Jake meeting that day and why did he lie about where he was going? What was Orwell keeping from me and why? I stared at the notes, but no ideas came. I decided to sleep on it and come back to it with a fresh mind in the morning.

- 4 This is definitely a must-have for any writer, poet or playwright or indeed anyone who works in the creative industries and sometimes struggles to fire up their creativity. The book is packed full of fascinating scientific facts about how our brains work and the importance of quality sleep and good nutrition in promoting creative thinking. The writers have both struggled with their own creativity over the years and they draw on their own experiences of 'bad days' to offer their insight and give helpful suggestions. There are plenty of practical tips on how to organise your workspace and what to do when you're having an off day and nothing seems to be working. It's well worth the money!

- 4 The role models Nick chooses give students **a dream they are able to achieve / financial support to help them**.
- 5 Teenagers feel **especially / less** motivated by role models who did extremely well at school.

READING

3 Read the magazine interview about motivational speakers. Match the questions (a–e) with the paragraphs (1–5).

- a What qualities do you need to be a motivational speaker?
- b What is a motivational speaker?
- c Do motivational speakers need to have an interesting personal story?
- d Why are motivational speakers important?
- e Do you need to be a good presenter?

4 Complete each sentence with a word from the article.

- 1 The main role of a motivational speaker is to people. (paragraph 1)
- 2 When people start to lose interest in their job, they become less at work. (paragraph 2)
- 3 Motivational speakers have often experienced in their own lives, which they have overcome. (paragraph 3)
- 4 The most important quality in a motivational speaker is to be able to communicate their own to the audience. (paragraph 4)
- 5 Speakers must be able to present their talks in a manner. (paragraph 5)

The role of motivational speakers

1 First and foremost, it's someone who is paid to inspire an audience. They are often people who have had unusual lives, perhaps have done unusual jobs or somehow achieved success against all the odds. They are usually hired by businesses to talk to their staff about their stories and their beliefs.

2 A good speaker gives people a new perspective, a new way of looking at things. It's very easy for people to start to feel that their life has become dull. When this happens, people lose the passion they once had. They lose the inspiration they once felt, which made them want to get up every morning and do the best they could. This loss of interest and motivation can begin to have an impact. So, from a business point of view, employees like this aren't as productive as they once were – they've lost their energy. A good motivational speaker can restore people's energy levels by giving them new ambitions, new reasons to do their best every day. A good motivational speaker can also help people who are struggling with their own issues, especially mental health problems.

3 Well, it certainly helps. The best motivational speakers are those who can talk about their own experiences. It might be an explorer who has undertaken a particularly challenging journey and can relive the high and low points with the audience, or someone who has managed to succeed despite suffering serious setbacks. The goal of a motivational speaker is not to inform an audience, but to get them to respond on an emotional level. The best way for a speaker to do this is by relating their own journey through life, how they felt when times were tough and what motivated them to battle on.

4 Well, you need to be likeable. People need to feel drawn to you on a personal level in order to be inspired by you. They need to feel that you're like them, so if you can overcome difficulties and succeed in life, they can, too. As well as this, you have to be good at getting things across in a way that's clear and easy to take in. Most of all, I would say you need to be able to get across your individual passion – the thing that drives you to succeed – so the audience will listen and respond.

5 Yes. Being a good motivational speaker is about engaging people so they want to listen to you. It's essential that speakers are confident in the way they deliver their content. They're usually clever at combining words with images, and able to crack the odd joke in order to keep the mood light.

READING

5A Read the blog post below. Choose the best title.

- a The history of photography
- b Why we all love selfies
- c In praise of portrait photography

B Read the blog post again. Are the statements True (T) or False (F), according to the writer?

- 1 Portrait photographs are sometimes criticised for being not very interesting.
- 2 There is still a market for professional portrait photography.
- 3 If you ask someone to take a photo of you as a favour, it will probably be good enough.
- 4 No one in the group will look foolish in a portrait photograph.
- 5 It can be interesting to repeat a family portrait after a period of time.
- 6 In painted portraits, people were often shown in their typical surroundings.
- 7 Most people would prefer to pass on their selfie-style photos to their grandchildren.

We've all seen them – those old family photos of grandparents and great grandparents sitting in perfectly posed compositions, usually in a photographer's studio. It's easy to dismiss these photos as dull, with the people sitting there perfectly still, seeming somewhat **wooden** as they stare at the camera, often barely smiling. Modern selfies, by contrast, are full of life, **dynamic** snapshots of individual, fun moments from our lives. Surely the posed portrait photograph has had its day?

Yet, professional portrait photography is still big business, so what's the appeal? One advantage is that if you want to capture a family group, you can do just that – it isn't the group minus Uncle Bill, who's the one taking the shot. Of course, you can always hand your phone to a passing stranger to make sure you're all included, but then you're dependent on the person's completely untested photography skills. And do they care if the photo also ends up including a random screaming toddler in the background? The second advantage is that you'll all look good. How many times have you wanted to capture a **spontaneous** moment and snapped a quick group shot, only to find that one person has their eyes closed? The art of the professional is making sure that everyone's engaged with what's happening and only pressing the button once they're sure that everyone will be pleased with the results. The family group shot also lends itself to being repeated five, ten or even twenty years later, allowing you to clearly see the progression as individual family members move from youth to middle age.

C Match the words in bold in the blog post with the meanings below.

- 1 happening without any planning
- 2 not natural
- 3 not moving at all
- 4 interesting or exciting to look at
- 5 moving a lot
- 6 planned and arranged in advance

D Look at the words in bold in the blog post again. Decide if they reflect a positive (P) or negative (N) idea.

But can you get away from the fact that professional photos are **staged**, with people arranged into rigid groups rather than living their life and expressing their individuality? The answer has to be 'yes', to some extent. Most professional photographers are mobile, able to set up their equipment in multiple locations, so you can choose to be photographed at home, surrounded by your possessions, like the subject of a painted portrait from an earlier era. Or you could choose a natural, outdoor background to give your photo a less **artificial** feel.

But my final argument in support of these formal photos is that they give us a record to pass on to the future. Yes, you may have amazing collections of photos on your digital devices, but will your grandchildren really want to look through thousands of shots of you in various locations, with different groups of friends, doing ridiculous things or pulling funny faces? The more I revisit my collection of family photos from previous generations, the more I think there is something sophisticated about them, about people simply presenting themselves to the camera, with a simple background that is far from **spectacular**. Modern selfies are all about the place, the backdrop, the event, whereas these more traditional photos are about the people and the families, which is, after all, what we want to pass down to future generations.

WRITING

a report: creating a rebranding campaign

5A Read the information about plans for Riki's Café. Which email (A or B) states that something must happen before changes to the café are made?

Riki's Café: Minutes of planning meeting

It was agreed that we should:

- expand the café and rebrand it to create a more modern image and attract more customers;
- sell takeaway food as well as eat-in options;
- consult the local community;
- set aside £500,000 for the rebranding project.

A

Dear Sir,

We are a group of parents of students who attend the secondary school close to Riki's Café. While we support the idea of updating the café, we are concerned that it might be tempted to sell the kinds of fast food that teenagers find so appealing. Many children walk home from school past the café and we strongly believe that it should focus on selling only healthy meals and snacks.

B

Sir,

On behalf of residents living close to Riki's Café, we would like to express our support for expanding and modernising the establishment. We feel it will be beneficial for the whole area. However, we are concerned that if the café sells takeaway food, this might lead to litter in the street. We also fear that cars will be parking outside the café, causing traffic jams. We feel these issues need to be addressed before the plan goes ahead.

B As a member of the council planning committee, you are going to write a report on the plans for Riki's Café and the responses to them. Make notes under the paragraph headings (1–4).

- 1** Overview of the plan
- 2** Advantages of the plan
- 3** Opposition to the plan
- 4** Conclusions and recommendations

C Write your report. Use the four paragraph headings and your notes from Ex 5B. Make sure you use formal language. Write 200–260 words.

Lesson 4D

LISTENING | personal stylists
READING | life without mirrors

LISTENING

- 1  **4.08** | Listen to the recording. Choose the words in the text that are different from what you hear.

Online stylists have become much more widespread over the last few years and they provide a way for ordinary people to get access to professional fashion recommendations from experts. The services they offer may include suggesting general tips on styles to wear that will suit an individual's colouring and body shape, and also recommending websites that individuals might like to try. Although the service can be time-consuming initially, a lot of people find that it helps them gain confidence by enabling them to make a wider variety of fashion choices.

- 2  **4.09** | Listen to a radio programme about personal stylists. Who sounds the most positive: Olivia, Amy or Ed?

- 3  **4.09** | Listen again. Choose the correct person.

- 1 Olivia / Amy / Ed complains that the recommendations were too expensive.
- 2 Olivia / Amy / Ed didn't like the fact that the recommendations were generated automatically.
- 3 Olivia / Amy / Ed feels that using the service reduced the amount they spent.

READING

- 4 Read the blog post. Match each paragraph (1–5) with the topic it discusses (a–e).

- a The history of mirrors
- b The psychology of mirrors
- c Mirrors in our modern lives
- d Beliefs and superstitions about mirrors
- e A suggestion

- 5 Read the blog again and choose the correct option (a or b) to complete the sentences.

- 1 In the first paragraph, the writer suggests that
 - a we are used to seeing our reflections in many different places and situations.
 - b it can be easy to forget what we look like if we don't have access to mirrors.
- 2 In Roman times,
 - a mirrors became available to poorer people, as well as the rich.
 - b mirrors did not give a very clear reflection.
- 3 In the tradition of *feng shui*,
 - a it is not a good idea to have mirrors in your home.
 - b mirrors in certain parts of your home can be a disadvantage.
- 4 The writer suggests that having access to mirrors
 - a may make us feel less confident about our appearance.
 - b helps us to develop an accurate idea of our appearance and personality.

Looking in the mirror

¹ Mirrors are so important to our everyday lives that it's hard to imagine life without them. We check our hair and face before going out, assess how we look in clothes before buying them and stare at reflections of ourselves while having our hair cut. In fact, mirrors are so common that it's hard to avoid them. They are in shops and lifts and public toilets and even walking down the street, we see our reflection in shop windows. Our own reflection is so familiar to us that it's hard to imagine that for most of human history, people actually lived without mirrors.

² The earliest mirrors were probably reflections in pools of water, where people would have caught a glimpse of their reflection while collecting water. The first man-made mirrors were made from types of rock that are naturally shiny. Mirrors of this kind existed in Turkey at least 6,000 years ago. In Ancient Egypt, copper was polished to create mirrors and later, the Romans used glass. But it was only in the fourteenth century that the first modern mirrors were made, with glass coated with silver or another metal, to create a clearer reflection. Until relatively recently, these were luxury items and expensive to make. Ordinary people rarely saw their own clear reflection.

³ Interestingly, mirrors have traditionally been regarded with suspicion. In Roman times, the reflection in a mirror was seen as a person's soul, removed temporarily from their body. For this reason, breaking a mirror was believed to bring bad luck. In Chinese traditions of *feng shui*, it's a bad idea to hang a mirror directly opposite a window, because it reflects energy out of your home rather than keeping it in.

⁴ Our assumption would probably be that mirrors help us feel better about ourselves because having a last-minute check before going out lets us know that we look at least acceptable to the world. However, maybe mirrors undermine our confidence by drawing attention to all those minor faults that everyone has. Psychologists can prove that we all suffer from a 'negativity bias', which means we automatically focus on our bad points. With that in mind, is it really wise to subject ourselves so often to our own critical examination?

⁵ So, the next time you're getting ready to go out, why not ask yourself, 'Do I really need to know if my hair looks less than perfect or I've got a few more wrinkles than I had last year?' And maybe we'd all be a lot happier if we just *assumed* we look good, without the mirror's judgement.

READING

4 A Read the article on page 33. What important decision (a–c) did Matteo and Ana make?

- to change to better-paid careers
- to sell many of their possessions
- to move to a different country

B Are the statements True (T) or False (F)?

- Matteo and Ana made their big decision before they chose their careers.
- Moving home made them realise how many possessions they had acquired.
- The idea of extreme downsizing is to keep your life as simple and cheap as possible.
- They never buy new things now.
- They have sometimes had second thoughts about their decision.

C Choose the extracts in bold in the article (1–8) that use irony to express the ideas (a–d).

- This is a way of living that we don't like at all.
- That was a complete waste of money!
- Other people didn't understand our decision.
- We are not at all jealous of things other people do.

My big decision by Matteo Bocelli

If you think of people making big life decisions, you might picture someone just starting out in life, choosing the path they'll follow for the next thirty years. Or maybe a couple nearing the end of their working life suddenly opting to sell their home and buy a house in another country, ¹**living the dream they were unable to pursue when they were younger**. But for me and my partner Ana, it happened in our late twenties, right in the middle of our chosen careers, just when our friends were planning to buy their own apartments.

We were both working long hours and, as you do through your twenties, gradually accumulating more stuff. It was our move to a bigger rental apartment, to accommodate all this stuff, that triggered the big change. We had all our possessions packed up in boxes and Ana suddenly looked at me and said, 'Do we really need all this?' ²**It was like a lightbulb suddenly lighting up in my head**. If we carried on as we were, we'd be endlessly working harder and harder to accumulate more and more possessions that we would drag around with us to ever more luxurious homes. ³**The perfect life!**

What was the alternative? After having researched several options, we finally came across an article promoting the idea of 'extreme downsizing'.

The theory is that you reduce your living costs to a bare minimum. You live in as small and cheap a space as you comfortably can and your only possessions are necessities that you couldn't possibly live without. ⁴**So, no more wardrobes full of clothes you hardly ever wear**, and no more purchases of over-priced but useless gadgets that you look at six months later and say, ⁵**Wow! I'm glad I spent half a week's salary on that!**

Two years later, we were living in a tiny apartment at less than half the rent we had been paying. We'd sold off about five suitcases' worth of clothes, our entire collection of books, the mini pool table, the framed pictures and most of our kitchen equipment. Now, we have strict guidelines on any new purchases we're tempted to make. We've never regretted our decision. Because our expenditure is so much lower, we've been able to change to less senior jobs – ⁶**explaining that to friends and family was an interesting experience!** But we're now much less stressed and we have loads more time and energy to do things that give us pleasure, like going for walks or sitting in the park or cooking a meal together. ⁷**We watch our friends working all hours and saving up to go on expensive holidays for two weeks**, so they can spend time together. ⁸**Of course we're green with envy** – that's what we do every day of the year!

C **5.04 | Listen to the recording. Choose the words in the text that are different from what you hear.**

The giant panda is a type of large bear native to China. They are one of the best-known examples of conservation in the world, but their worldwide fame only took off in the early twentieth century, when an American fashion designer, Ruth Harkness, caught a baby panda and flew it to the US, where the American public immediately fell in love with it. In the 1960s, four panda reserves were created in China and a law was introduced which banned killing the animals. They are now no longer considered endangered.

 - b** something that leads on naturally to other changes
 - 3** Why should you attach a new habit to an existing routine?
 - a** It will make you think about it more.
 - b** It will be more convenient for you.
 - 4** What advice does the speaker give about failure?
 - a** Don't allow yourself to break a habit two days in a row.
 - b** Try to avoid breaking a habit for even one day.

READING

- 3** Read the article. Choose the best answer to the question in the title.
- a** Your basic personality is controlled by genetic factors and it is impossible to change.
 - b** It is not difficult to change your personality, if you follow a few simple guidelines.
 - c** Your personality is not fixed and it is possible to change it, but it takes time and effort.
- 4** Read the article again. Are the statements True (T) or False (F)?
- 1** We cannot change the parts of our personality that we inherit from our parents.
 - 2** People become more likely to enjoy new things as they get older.
 - 3** Some patients notice changes in their personality after they recover from an illness.
 - 4** In a 2021 study, researchers advised participants on which aspect of their personality they should change.
 - 5** The participants noticed changes in their personality, although their friends and family often disagreed.

Can you change your personality?

Would you like to be more outgoing? Do you worry about things too much and wish you could be more relaxed, like your friends? In the past, it was thought that these qualities were part of our basic personality and therefore fixed for our lifetime. However, it now appears that our personality may be more adaptable and flexible than we previously thought and the key may be to change our habits.

Of course, our personality is partly controlled by our genes. Studies of twins have shown that about half our personality can be explained by inherited factors and is therefore fixed. So that leaves the other half that is open to modification. Some changes seem to happen quite naturally at different stages of our lives. Our organisational skills increase as we get older, as does our emotional stability, meaning we tend to worry less as we go through life. People also become more likeable as they age, although their willingness to be open to new experiences tends to decrease.

It seems there are many reasons why our personality might change. People who are successfully treated for depression, for example, may find that they are more outgoing after their treatment and less likely to suffer from anxiety. It might also be possible to bring about changes ourselves. One study in 2021 asked volunteers to choose one feature of their personality that they wanted to change. Using an app, they were each given daily tasks to develop this aspect of their personality. For example, they were instructed to engage in conversation with new people if the aim was to become more outgoing. After three months, it seemed their personalities had indeed changed. Friends and family members were also asked for their observations of the individuals and in general, confirmed the changes.

So, what's the key to changing your personality? Well, the first thing to point out is that it isn't easy. You need to know what you want to change and to have a clear idea of the long-term benefits it will bring to your life. You will often need to put in a lot of hard work. For example, if you want to be more organised, you might need to start doing all those boring things that you would normally put off, planning your time each day and giving yourself constant reminders. However, if you can stick with it and slowly change your habits, you will also begin to change your personality, and maybe start to improve your life.

B Complete the text with the correct form of the verbs in the box.

determine forecast generate input
miscalculate process

We accept that computer algorithms can ¹ the weather fairly accurately, but most of us would assume that people are better when it comes to predicting human behaviour. However, in a project at the Massachusetts Institute of Technology, teams of people competed against a computer to predict which students would drop out of a course. A wide range of data about students' study habits was ² into the computer. The computer program ³ all the data and ⁴ some interesting results, which turned out to be more accurate than the human predictions. It seemed the two most important factors which ⁵ how likely students were to drop out were how early they began working on projects and how much time they spent on the course website. However, it seems the humans ⁶ and wrongly assumed that students who handed in their work late were more likely to abandon their studies.

B Practise saying the sentences in Ex 3A.

READING

- 4**  Read the paragraph and answer the questions. Use no more than three words from the paragraph for each answer.

We are all used to paying regular bills for services such as electricity, our phone use or online subscriptions. However, because the majority of us use direct debits to pay them, we are barely aware of the money slipping out of our account each month. We probably know that we should check that the amounts being taken are correct, but due to a lack of time, most of us never do. So, we'd probably be horrified to learn that mistakes are actually relatively common. It's tempting to blame computer errors when mistakes are made, but in the majority of cases, it's actually human error that is to blame.

- 1 How do most people pay their regular bills?
.....
- 2 Why do most people not check their bills regularly?
.....
- 3 What do people assume leads to mistakes?
.....
- 4 What in fact causes most mistakes with bills?
.....

- 5 A** Read the article. Match each paragraph (1–3) with the summaries (a–c).

- a A computer error caused the company to charge me too much.
- b I received a sum of money by mistake and had to pay it back.
- c Human error led the company to set up my account incorrectly.

- B** Read the article again and choose the correct person or people, *Luke*, *Elise* or *Maria*, to answer the questions.

- 1 Which two people feel that they were partly to blame for the situation?
- 2 Who feels the experience will have a positive effect on their behaviour in future?
- 3 Which two people feel annoyed that they lost money?
- 4 Which two people are generally positive about the way the company responded?
- 5 Who accepts that no individual was to blame for the situation?
- 6 Who feels particularly annoyed that the company did not express regret?

Check your bills!

Do you trust the computer systems that generate your bank statements and regular bills? We hear from three people who paid the price for not monitoring their incomings and outgoings sufficiently.

Luke Hardy

¹I don't check my bank statements regularly and I'm no expert at budgeting. If there's money in my account, I spend it. If there isn't, I hold back until payday. So, I guess I have to take some responsibility for what happened to me. It was last year. I had a new job and was going out a lot, and money didn't seem to be an issue. Until, that is, I received a letter from my bank telling me their systems had accidentally deposited £2,000 in my account and now they wanted it back. That explained why I'd been feeling so well-off! I have to say, when I spoke to the bank, they were pretty understanding about it and agreed a repayment plan that I could manage, so I've decided to treat it as a valuable life lesson and be more careful from now on.

Elise Wilson

²I don't really pay much attention to bills so I must admit I didn't notice until it was too late that I'd been charged too much for three months in a row. Apparently, they'd just got a new computer system and it had caused quite a few customers to be charged the wrong amount. They were really good about it as soon as I pointed out the error. They acknowledged it was their fault and sent me a refund. The problem was the high bills had sent my bank account into overdraft, so I ended up paying a load of bank charges, which was annoying to say the least! Still, these things happen. No one at the company could have prevented it. I suppose it was partly my fault for not checking my bills and my bank balance carefully enough.

Maria Benson

³It isn't only computers that make mistakes. I switched phone companies last year and specifically went for a contract that offered unlimited internet use. It was around six months later when I started to notice that towards the end of the month, I always seemed to be short of cash. I checked my bank statements and that's when I realised the mistake. The person who had signed me up had messed up and put me on a price plan that limited my minutes online, so every month I was going over my limit and getting loads of extra charges. I was furious, especially as it took me ages to get through to someone at the company to sort it out. It was quite clearly their mistake, but I got no apology and no compensation! Outrageous!

- 1 Melissa is writing to the hotel to **complain about** / **thank them for** the service.
- 2 Melissa wants **some** / **all** her money to be repaid.

To whom it may concern,

¹**I am writing to express my disappointment with the service I received from your hotel recently.**

I arrived on Friday 12 June, having booked my weekend stay several weeks earlier. I had specifically chosen your hotel as it offered 'luxurious rooms'. However, this was far from the reality.

I had booked a room with a sea view and balcony.

²**Please see the attached booking form for confirmation.** However, when we arrived, we were informed that no such rooms were available. Instead, we were offered a small room with a view of the car park. ³**To make matters even worse, there seemed to be a problem with the air conditioning** in the room, with the result that the room was unbearably hot.

⁴**I am sure you understand my frustration** at having selected a room online, only to find that the room I had booked was not available for me. Instead, I was given a room that was not fit for purpose. ⁵**I have no doubt that you will feel able to offer me a full refund** and ⁶**I look forward to hearing from you soon regarding this matter.**

 - 3 In experiments, the chimpanzees seemed to be more nervous about using a machine.
 - 4 According to the writer, most people would find it more difficult if a person, rather than a machine, took their money and didn't give them a drink.
 - 5 We are less likely to trust machines if we are under stress.

Imagine the situation – a plane is coming down to land. The pilot is alert, and suddenly begins to have the feeling the plane is too low. But it's still switched to the automatic pilot at this stage and the system seems to be working. At what point does the pilot decide the computer system is wrong and take charge of the plane manually? There have been situations such as this, where it turns out the technology was in fact faulty, but it took a while for the human operating the system to spot the fault and take control.

Researchers who have studied the interaction between people and machines have noticed that we seem to be naturally biased in favour of machines. To take a simple example, if we needed to calculate a complicated sum, we would probably accept the result generated by a calculator, but might feel the need to double-check it if a colleague had worked it out manually. So, why do we seem to put so much trust in machines?

In experiments with chimpanzees, researchers gave the animals a choice between trusting a machine to deliver a treat, or trusting another chimpanzee. Both the machine and the other chimpanzee were unreliable, as there was no guarantee of a reward from either, but when faced with the choice, the animals favoured the machine and seemed less concerned when it didn't deliver the reward. Scientists believe this may be because if they trust a fellow animal, there is also a social risk, as well as a risk of not getting the reward.

If the animal is disappointed or 'betrayed' by a machine, they might feel disappointed, but if they suffer at the hands of a fellow animal, it might also have an effect on their relationships and position within the group. A similar situation for humans might be that if we put some coins into a machine and it fails to deliver the drink we wanted, we might feel disappointed, but if we give our money to a server in a café and they then refuse to make us a coffee, we would feel a lot of additional emotions, from anger to shame or embarrassment.

The stresses of modern life can make this tendency to trust machines even stronger. When people are faced with large amounts of information to process at once, especially if they are under time pressure, they are more likely to turn to machines to provide the answers, rather than trusting their own judgement or that of colleagues. So, as technology plays an ever more important role in our lives, can anything be done to encourage people to be more critical of machines, rather than simply letting them make all the decisions? The answer probably lies in training people to develop awareness of their own biases, then developing their critical-thinking skills to enable them to evaluate situations independently from machines and make their own judgements. With more 'intelligent' humans operating the machines, we can hopefully achieve the best of both worlds, with the combination of machine computing power plus human judgement.

explaining meaning

1 A Choose the correct words to complete the sentences.

- I found it difficult to in a few words exactly how I felt.
a sum up b signify c illustrate
- How would you the word 'luxury'?
a specify b spell out c define
- He told an amusing story to the point he was making.
a signify b illustrate c define
- The photo perfectly the mood at the festival.
a defines b specifies c captures
- It's important to exactly what kind of holiday you are looking for.
a specify b capture c signify
- There were no words to to my friends exactly how I was feeling.
a convey b signify c illustrate

B Choose the correct words to complete the text.

Dictionaries can ¹**define / signify** the meanings of words and we can use examples to ²**signify / capture** some of the typical situations in which they are used. But it's hard to ³**signify / spell out** in detail how words shift and develop over time. The words *awful* and *awesome* perfectly ⁴**define / illustrate** how the words we use can change and come to ⁵**convey / spell out** completely different meanings. In Old English, for example, the word *awe* ⁶**signified / summed up** a feeling of wonder, so something that was *awful* or *awesome* was ⁷**defined / captured** as something that caused you to feel a great sense of wonder – it was a good thing. Over the centuries, the meaning of *awful* changed to mean something that caused fear, whereas *awesome* retained its positive meaning and gradually came to mean 'very good'. To ⁸**sum up / convey**, two words that once meant the same went their separate ways and now have almost opposite meanings!

WRITING

a comment on a blog post

5A Read the blog post. Choose the writer's main point.

- a Schools should teach children about the history of their language.
- b The standard of language that people use is declining.

I know this probably won't be a popular point of view, but I really think we should be teaching children about word origins. What could be more important than learning about the history of your own language? Learning about the fascinating origins of words helps us understand modern meanings and use language in a more creative way. Does anyone else agree with me that this should be part of the school curriculum?

B Read the comment on the post from Ex 5A. Choose the correct words to complete the sentences.

- 1 The writer **agrees** / **disagrees** that word histories are interesting.
- 2 The writer **accepts** / **doesn't accept** that understanding word origins helps you use language more creatively.
- 3 It is written in **a formal** / **an informal** style.

I agree that word origins are fascinating, especially when they show us how meanings have changed over time. But to me, this doesn't justify adding them to the curriculum. Far better to focus on getting kids to read and write the modern language well than confusing them with a lot of historical details. And it simply isn't true that people who don't know about word origins can't be creative and imaginative. There are plenty of extremely creative writers who have no interest in how words first entered the language!

6A Read the blog post below about learning a second language. Choose the sentence (a–c) which expresses the writer's opinion.

- a It is much easier to learn languages after you have left school.
- b Schools should teach all children a range of different languages.
- c Students should not be forced to learn other languages at school.

Mon | 09.33

Is it just me, or does anyone else think it's crazy that children in schools don't have to learn at least two other languages? With more and more people travelling to or living in other countries, surely language learning is a skill that everyone needs? Learning other languages at school gives children a love of language that will stay with them all their lives and it isn't possible to catch up if you don't learn the basics when you're young. As well as teaching you about other cultures, learning other languages gives you more understanding of the way your own language works and makes you better able to communicate in all kinds of situations. Please can we insist that all kids learn at least two languages?

B Write two comments on the blog post in Ex 6A. Write one that agrees with it, and one that disagrees. Add some points of your own and, where necessary, correct points that the writer has made. Use an informal style. Write 80–100 words for each comment.

- 5 I never eat processed foods.
- 6 I only buy imported products made by companies that pay fair wages to their workers.

B Read the posts again. Are the statements True (T) or False (F)?

- 1 Daisy believes that the current food system does not allow people in developing countries to earn enough money.
- 2 Daisy still buys luxuries, even if this goes against her principles.
- 3 Leon believes that only people in poorer countries will feel the effects of climate change.
- 4 Leon thinks that his local, vegetarian diet is good for his health as well as the environment.
- 5 Sara argues that many popular foods do not really deserve to be called 'food'.
- 6 Sara believes the evidence proves that industrial foods are bad for us.

6 Complete the summary of the three texts with the words in the box.

climate change locally meat processed
producers products transport
working conditions

People have different priorities when they make food choices. For Daisy, the most important considerations are the pay and ¹..... of food ²..... in other parts of the world. She therefore buys food from companies that don't exploit their workers. Leon, on the other hand, feels that ³..... is the priority. For this reason, he doesn't eat ⁴..... and he also buys food that is produced ⁵....., to reduce the use of fuel for ⁶..... For Sara, the priority is avoiding ⁷..... foods that contain chemicals which are bad for people's health. Therefore, she only chooses ⁸..... that she thinks can be called 'real food'.

Daisy

The question at the front of my mind whenever I buy anything in the supermarket is: who produced this food and where? Supermarkets are crammed with a massive range of products from every corner of the globe and it's easy to turn a blind eye to the conditions experienced by the people who produce them. We know, for example, that the people who grow and process tea and coffee for Western markets often suffer appalling working conditions. The farmers aren't paid a fair price and the pickers often have to work very long hours. I try to get round this by only choosing foods made by companies which pay a fair wage to their employees and use a proportion of their profits to encourage economic development in the countries where they operate. It means I have to go without some luxuries, but I'm prepared to accept that.

Leon

I think we all need to wake up to the most serious situation that's facing the planet. Climate change will affect us all sooner or later and we need to act now to prevent the worst outcomes. That's why I'm careful to make food choices which have a minimum impact on the planet. I've become a vegetarian, so I no longer consume meat or fish. Both these industries use up a lot of precious resources and there have also been many studies linking meat consumption to a range of different illnesses. I also go for local produce where possible. It just doesn't make sense to use large amounts of fuel to transport food halfway around the globe when there are homegrown alternatives. I feel that by the choices I make, I'm doing my best for the future of the planet and I'm also choosing a diet that's good for me!

Sara

When it comes to food, I follow the principle that if it isn't food, I don't eat it. That sounds completely obvious, until you realise that a lot of the best-selling food products in supermarkets aren't what I would consider to be 'food' at all. If you look at the ingredients on a packet of biscuits, for example, you'll see a list of substances that look as if they belong to an industrial process rather than on our dinner plate. They are there to give the so-called biscuit an attractive colour, make it taste like lemon or whatever and preserve it so it can sit in the supermarket for months. And people are putting all these chemicals into their bodies, even though we don't really understand whether they're doing us any harm. As far as I'm concerned, food should be made with real, natural ingredients. What I think of as 'industrial' foods are great for making profits for the large food corporations, but they ruin people's health.

Lesson 7D

LISTENING | a childhood memory

READING | early memories

LISTENING

- 1**  **7.09** | Listen to three people talking about a childhood memory. Match the speakers (1–3) with a topic (a–d). There is one topic you don't need.
- | | | |
|------------------------|-----------------------------------|---------------|
| 1 James | 2 Ellie | 3 Josh |
| a a celebration | c a visit to see relatives | |
| b a holiday | d school | |
- 2**  **7.09** | Listen again. Complete the sentences with one or two words from the recording in each space.
- James thought that his new teacher was
 - James didn't enjoy
 - Ellie and her granddad played with a from his childhood.
 - Ellie said the best part of the day was using a for the first time.
 - Josh won a in a game.
 - Josh wasn't allowed to eat his on the beach.

READING

- 3** Read the article. Choose the reason (a–c) why the author has written the article.
- to encourage readers to remember as much about their early lives as possible
 - to discuss different experiences we have as young children and how they affect our adult lives
 - to explore the topic of early memories and how accurate they might be
- 4** Read the article again. Choose the correct options.
- In the first paragraph, the writer
 - describes an early memory and then questions whether it is real.
 - discusses the types of early memory people are most likely to have.
 - Up to the age of two, children's brains
 - do not form any long-term or short-term memories.
 - are unable to retain memories because they are growing quickly.
 - At the age of seven, children
 - begin to establish long-term memories.
 - stop creating new brain cells.
 - Thoughts can sometimes become 'false' memories
 - if our brain makes a mistake.
 - if we really want to believe something.
 - When researchers encouraged people to create false memories involving food,
 - the memories were sometimes strong enough to make them ill.
 - it went on to influence their likes and dislikes.

Early memories

I'm sitting on my grandmother's knee and opening a huge, colourfully wrapped present. There's a cake on the table with candles in it. I think it was probably my second birthday. Many of us have early memories like this, but can we be certain they are real? Of course, in my case, I know the celebration happened because there are photos to prove it, but that's just the problem – have I created the memory from the photos, rather than genuinely remembering the event itself?

Studies have shown that the brains of children up to the age of two do not have the ability to store long-term memories. Young children make memories, of course, but they are not long-lasting. It's thought that because children's brains are growing so quickly at this stage, the new brain cells being created somehow disrupt the storage of longer-term memories. Our brains then have a clear-out around the age of seven, at which point the very early memories we have accumulated are 'deleted' and we begin to store the long-term memories that will stay with us all our lives.

So, if this is the case, why do so many of us have these early memories? A study of early memories at the City University of London concluded that these memories are not genuine, but have been 'created' by our adult brains. One theory about how this happens relates to the way our brains process new thoughts and images. So, for example, if you think about a lion lying under a tree, your body will automatically categorise it as either something you have experienced for yourself, something you have imagined or something you learned about second-hand from talking to others or seeing a film. Most of the time, our brains make the right decision, but sometimes they get it wrong. In the case of my second birthday, I have seen pictures of the event, but my brain has perhaps falsely categorised the images under the 'I experienced this' category.

You might wonder what the harm is in storing a few false memories. Most of the time, there may be none. However, there have been experiments in which researchers deliberately encouraged participants to create false memories of becoming ill from particular foods at an early age. They then studied the participants' reactions to the foods in the present and found that the memories did indeed have an effect on the tastes and preferences of the people as adults. So, maybe my own false memory could explain why I still find it difficult to resist cake now!

GRAMMAR | concession

VOCABULARY | dystopian and utopian societies

PRONUNCIATION | pausing when conceding a point

VOCABULARY

dystopian and utopian societies

1 A Choose the correct words to complete the posts.

 **SamT** I was having a discussion with some friends last week and one of them said that it wasn't possible to have a perfect society, where everyone was happy. When I disagreed, she accused me of ¹**idealism** / **oppression**. So I want to know what you think. Is it possible to create a ²**curfew** / **paradise** on Earth? And, if so, how?

 **Hitch_58** I'm studying law so, for me, one of the most important things is to make sure there is ³**paranoia** / **justice** for everyone. No one should be punished if they haven't done anything wrong. ⁴**Oppression** / **Harmony** happens when there is no independent legal system and people in power can do whatever they want with few consequences.

 **ThomB** To create a perfect world, you first have to get rid of all kinds of ⁵**surveillance** / **innocence**. At the moment, there are cameras everywhere so people have little freedom to lead their lives in the way they want to.

 **Novak77** I'm afraid I think the idea of a perfect world is nonsense. There has never been any such thing as an age of ⁶**paranoia** / **innocence**, when people were kind and good and lived together in ⁷**harmony** / **greed**, with no social problems at all. People are basically always dissatisfied with their lives, which is what leads to ⁸**tranquillity** / **social unrest**.

B  Complete the conversation using words from the box.

curfew greed innocence paradise

READING

4A Read the extract from a story below. Choose the correct words to complete the sentences.

- 1 The story is set in a **utopian** / **dystopian** future.
- 2 The main danger the characters face now comes from the **Dark Day** / **Guardians**.
- 3 The ending feels generally **optimistic** / **pessimistic** about the future.

B Read the extract again. Choose the five things you can infer. Identify the parts of the extract that help you infer these things.

- 1 Life for the narrator in the past was not perfect.
- 2 A major event led to a sudden change in society.
- 3 Some people were pleased that the change happened.
- 4 Not many people live in the city now.
- 5 The characters struggle to find food every day.
- 6 The group do not always get on well together.
- 7 It is difficult for people to know who they can trust now.
- 8 The situation in the city is now beginning to improve.

Another day dawned and I crawled out of my sleeping place in the empty office building I now called home. I could hear the others already up and about, so I headed for the 'kitchen', the communal area where we tended to gather in the mornings, to discuss our strategies and priorities for the day. As always, a part of me couldn't help but contrast my current dark, concrete bedroom with the comparative luxury I had enjoyed before. And, as always, I had to remind myself that it isn't helpful to look back, especially when it's so easy to focus on the positives of the past and overlook the negatives, like the constant pressure to work, earn money and conform. That said, at least before the Dark Day I had a comfortable mattress!

I spotted a bottle of clean water on my way to the kitchen. Someone had obviously been out already and had a lucky find. Things were shaping up to be a good day! I took a sip, then poured a small amount into my cupped hands and rubbed them over my face, enjoying the cool, fresh sensation it produced. It was strange to think of all the little things we had taken for granted before the Dark Day had turned everything upside down, like running water, full supermarket shelves and clean clothes every day.

The others greeted me as I came into the kitchen and I felt a rush of joy to be part of a human community again. The first few weeks had definitely been the worst, before the ten of us in the group had gradually come together, each terrified that we were the only survivor in the whole city.

5  Read the text about dystopian fiction and answer the questions. Use no more than three words for each answer.

It might seem strange that so many people enjoy reading dystopian fiction and entering worlds of hostile or frightening societies. But this fantasy element of dystopian fiction is part of the appeal, as it gives people the opportunity to escape reality. In addition, although the situations may be difficult or even frightening, readers are able to look up to the main characters. These characters, who are often ordinary people, find themselves in situations where there are difficult problems they need to overcome, so they become unwilling heroes that we can all relate to. And most importantly, they behave with honesty and integrity in a world of fear and uncertainty.

- 1 What does dystopian fiction give people the chance to do?
.....
- 2 What do people find inspiring in dystopian novels?
.....
- 3 What do the characters have to do in the stories?
.....
- 4 What qualities do the characters usually show?
.....

Having companions once again gave us all a sense of purpose and a belief that we would find a way through this and create a new future for ourselves. I sat down and was handed a cup of warm but weak coffee. I took a sip – sugar, too! The main priority for the day, as for every day, was securing supplies of basic necessities. The supermarkets and warehouses that had remained standing following the destruction brought by the Dark Day had long since been emptied by gangs coming in from outside the city, so we needed to think hard about where there might be stores of anything still fresh enough to consume.

We knew the time was coming when we would have to leave the city and head towards more remote areas where we could find land to grow crops and create a more sustainable way of life. The idea was appealing, but we also knew it was full of dangers, not least from the self-appointed Guardians, survivors of the old establishment who had taken it upon themselves to seize control of parts of the country, take responsibility for law and order and carry out their own forms of justice to anyone they saw as a threat. We had heard rumours of groups such as ours being approached on the road with offers of hot meals and practical help, only to be captured and forced to join work teams. It was clear there were dangers, but our confidence had grown over the past weeks, strengthened by our sense of solidarity and we believed we could make it.

WRITING

an opinion essay

6A Read the essay. Choose the writer's main point.

- a The government should offer more training courses to individuals to help them become inventors.
- b The government should offer financial incentives to individuals who come up with useful inventions.
- c The government should ban inventions that use resources but offer no real benefit to people.

¹ Just look at all the brilliant ideas they come up with, like energy-saving bulbs, fridges that can tell us when we're running out of milk and security systems that allow us to check on our home when we're away on holiday. Unfortunately, too many of these people use their talents to design things that we don't need, like expensive plastic toys that use up precious resources but end up in landfill sites in six months.

² The answer, of course, is money. Large companies pay good salaries to inventors and designers who can come up with good ideas that will appeal to the public and generate profit. For this reason, some of the best minds in the world are spending their time designing kitchen gadgets or accessories instead of using their skills to tackle the really important problems facing the world.

³ Imagine, for example, if governments offered large cash prizes to inventors who could come up with designs for things such as cheap but environmentally friendly heating systems, or ways of reducing the amount of water needed to grow crops. If the prizes were generous enough, individual inventors would be far more likely to spend time working on these worthwhile projects. Moreover, the solutions they came up with would benefit us all.

B Add the topic sentences (a–d) to the gaps in the essay (1–3). There is one sentence you don't need.

- a So, why do inventors devote so much time to inventing things we don't really need?
- b Generous financial incentives would give individuals an incentive to focus on the inventions we need.
- c There are thousands of new but useless products designed and produced each year.
- d There are plenty of clever inventors in the world.

7  Read the question. Then, plan, write and review your answer. You must write at least 200 words.

'We all buy far more products than we need and we should all make an effort to consume less to protect the environment.' To what extent do you agree with this opinion?

- 1 BenW / ChuckP mentions rethinking decisions we made in the past, to change the course of our lives.
 - 2 Nesta / BeaZ thinks that we can't usually do anything to stop the passage of time.
 - 3 Chuck P / BenW believes that fiction allows us to escape from problems in our real lives.
 - 4 BeaZ / Nesta says that time travel would allow us to experience different time periods in the past.
 - 5 BenW / BeaZ says that time travel would give us the power to control time, rather than being controlled by it.
 - 6 Nesta / ChuckP thinks we are keen to know what life will be like for future generations.

ChuckP

I've been watching a lot of science-fiction films and I've got into the idea of time travel. So I'd like your opinions on this question.

Personally, I think it's the same as for any other kind of fiction, whether in books or films – it's our need to get away from the reality of everyday life. Let's face it, real life is pretty dull, governed by routines and full of difficulties, both big and small. We sometimes need a fantasy world where we can forget all the things that irritate us or worry us in real life and find ourselves in a completely different time and place. Science fiction feeds our imagination and enables us to do this.

BenW

A lot of popular time travel stories are personal ones, where people can go back and maybe change things, so events take a different course. I think this idea appeals to us because we know that we all make slip ups sometimes. And mistakes have consequences that stay with us in the present. So, we're fascinated by the idea that we could go back and correct our mistakes. I think we're also aware of the importance of chance in our lives – a chance meeting that leads us off in a particular direction, an instant decision we make which automatically prevents other things from happening. So, I think we like the idea that we can reflect on what would have been a better outcome, and then go back and make sure it happens.

Nesta

For me, the key thing is curiosity. There's so much knowledge available about what life was like in the past, from accounts of the big events that shaped history to personal accounts of the lives of ordinary people and I think we'd all jump at the chance to go back and see certain things for ourselves. What was it like travelling across the ocean on an early sailing ship? What was it like living in a medieval castle? I also think we have a huge amount of curiosity about the future. We know that our lives are limited and won't go on forever, so this leaves a huge question about what the world will be like when we're not around to see it.

BeaZ

I think in some ways it's to escape from time itself. Time rules our lives. We look at clocks and see the seconds ticking by and there's nothing we can do about it. Time limits us and restricts us, by seeming to pass too quickly when we'd like it to slow down, or seeming to drag when we want something to be over. And once time has gone, we can't get it back. I think with the idea of time travel, we can feel like we're in charge of time, rather than the other way around.
